

Cleaner. Safer. Soy.®

Dust is a *new*, innovative, patented product made to replace the grimy graphite/talc mix in the planter. Dust is a 100 percent renewable soy protein product. Microscopically, it has more round shapes than graphite and talc, which are materials that are milled out of the ground. Dust's round shapes provide lubricity for mechanical parts in meters and relief of static friction while making your seeds flow better through your planter. You will find it clean and safe to use.

KEY BENEFITS

- Replacement for Talc & Graphite in Planter
- Made with 100% Soy Protein & Lecithin
- Patented, Microplastic-Free, Seed Lubricant
- Used on 7 million+ Acres Per Year on more than 20 Different Crops

REMINDEZ
WITH DUST, LESS IS MORE

To calculate the amount of DUST need for planting use the ratio of 1 scoop equals 1 oz of DUST.
